## CERTIFICATE OF APPROVAL No CF 5228

This is to certify that, in accordance with TS00 General Requirements for Certification of Fire Protection Products The undermentioned products of

### DOORPAC LIMITED

6 Ranskill Court, Sheffield, South Yorkshire, S9 5FZ Tel: 0114 256 1615

Have been assessed against the requirements of the Technical Schedule(s) denoted below and are approved for use subject to the conditions appended here to:

**CERTIFIED PRODUCT** 

Doorpac Limited FD30 Strebord 44 ITT Timber Door Assemblies

### TECHNICAL SCHEDULE TS10 Fire Resisting Door

Assemblies with Non Metallic Leaves

Signed and sealed for and on behalf of Warringtonfire Testing and Certification Limited

Paul Duggan Certification Manager

Issued: Revised: Valid to: 3<sup>rd</sup> April 2014 10<sup>th</sup> January 2022 1<sup>st</sup> November 2026

This certificate is the property of Warringtonfire Testing and Certification Limited Registered in England and Wales

Registered Office: 3rd Floor, Davidson Building, 5 Southampton Street, London, WC2E 7HA. Company Registration No: 11371436

## CERTIFICATE No CF 5228 DOORPAC LIMITED

#### Doorpac Limited. FD30 Strebord 44 Timber Door Assemblies

This approval relates to the use of the above doors in providing fire resistance of 30 minutes insulation (if incorporating not more than 20% of uninsulating glass) and 30 minutes integrity as defined in BS 476: Part 22. Subject to the undermentioned conditions, the doors would be expected to meet the relevant requirements of BS 9999 for FD30 door assemblies when used in accordance with the provisions therein.

- 1. This certification is provided to the client for their own purposes, and we cannot opine on whether it will be accepted by Building Control authorities or any other third parties for any purpose.
- 2. The doors are approved on the basis of:
  - i) Initial type testing
  - ii) A design appraisal against TS10
  - iii) Inspection and surveillance of factory production control
  - iv) Certification under a CERTIFIRE approved Quality Management System
  - v) Audit testing in accordance with TS10
- 3. The door assemblies comprise cellulosic cored leaves in various finishes for use with timber frames, with intumescent edge seals (ITT FD30).
- 4. This approval is applicable to both complete door assemblies and door leaves. Where the door is not supplied in a fully fitted form it is a condition of this approval that an agreed Data Sheet accompanies the product and is complied with in its entirety. Failure to do so will invalidate this approval and may jeopardise the fire performance of the door.
- 5. This approval is applicable to latched and unlatched, single-acting, single and double-leaf, ITT assemblies, at leaf dimensions up to those given in Tables 1, 2, 3, 4, 5 & 6.
- 6. Glazing shall only be undertaken by the door manufacturer, or a CERTIFIRE approved Licensed Door Processor, and shall be in accordance with the Data information Sheet and Construction Specification. No site cutting or glazing of apertures is permitted.
- 7. Hardware items, including closing devices and intumescent fire seals, shall be as specified in the data sheet.
- 8. The door assembly shall be mechanically fixed to wall constructions having a fire resistance of at least 30 minutes.
- 9. Labels to the CERTIFIRE design, or approved by CERTIFIRE, referencing CERTIFIRE and CERTIFIRE Ref. No. CF5228 and FD30 classifications resistance shall be affixed to each door in the prescribed position.

### CF 5228 DATA SHEET

#### 1. <u>General</u>

This door leaf has been fire tested and is certified by CERTIFIRE as being capable of providing fire resistance of 30 minutes integrity and 30 minutes insulation (if incorporating not more than 20% of uninsulated glass) as defined in BS 476: Part 22: 1987, when installed in accordance with the following conditions. Subject to these, the door will meet the relevant requirements of BS 9999 for FD30 doorsets when used in accordance with the provisions therein.

In recognition of this the leaf carries a prefixed label on the top edge or hanging edge of the door, issued under the terms of the CERTIFIRE scheme. This label uniquely identifies the door leaf, the manufacture of which complies with a CERTIFIRE approved Quality management System and is subject to on-going surveillance. This label must not be removed.

It is emphasised that the certification is conditional upon the following instructions being complied with in their entirety. Failure to do so will invalidate this approval and may jeopardise the fire performance of the door. Door assemblies supplied pre-fitted with components by the Prime door manufacturer may be considered to meet the requirements in respect of those items.

#### 2. Door Leaf

This approval is applicable to single-action, single and double-leaf, latched and unlatched, assemblies at leaf dimensions up to those detailed within tables 1, 2, 3, 4, 5 & 6 below.

| Door assembly configuration   | Max. Height (mm)      | Max. Width (mm)        | Area (m²) |

|                     | iv) Door Stop:                          | 13 mm deep pinned, screwed, or rebated from solid<br>(510 kg/m <sup>3</sup> min)<br>Where the stop is rebated from solid the overall frame<br>thickness must be increased by 13 mm to<br>accommodate the 13 mm rebate depth                  |  |  |
| Winkhaus AV2        | i) Material:                            | Hardwood   |  |  |
| Frame               | ii) Density:                            | 697 kg/m <sup>3</sup> min.   |  |  |
|                     | iii) Dimensions:                        | ns: 95 mm by 44 mm minimum, complete with a 12 deep rebate.  |  |  |
| Jointing:           | Butt joints, mortion screw fixed to the | rtice and tenon, mitred or half lapped joints with the head the jambs using two steel screws   |  |  |
| Door to frame gaps: | Not to exceed 4 r<br>and 3.5 mm at th   | mm except at threshold where up to 8 mm is permitted the meeting stiles  |  |  |

#### 4. Overpanels & Sidepanels

Flush overpanels may be included up to a maximum height of 600 mm and shall include 9 mm thick hardwood lippings (minimum) and opposing lipping to the leaf head or a rebated 20 mm thick hardwood lipping with 22 mm wide by 11 mm deep rebate at the bottom edge, with a corresponding 20 mm thick rebated hardwood lipping in the top edge of the leaf. Overpanels shall be lipped on all edges.

Overpanels to be fixed using steel screws at a maximum of 400 mm centres and a maximum 100 mm from each corner, through the centre of the panel to a depth of at least 30mm.

Door to overpanel meeting edges shall incorporate a 15 mm by 4 mm Lorient intumescent seal in each rebate, or centrally within the leaf / overpanel thickness where a square (non-rebated) door to overpanel meeting edge is adopted.

Where rebated door to overpanel meeting edges are not incorporated on double-leaf assemblies, timber astragals (min  $640 \text{ kg/m}^3$ ) are required at the junction between the bottom of the overpanel and the top edge of the door.

Transomed overpanels may be included up to 1000 mm high, with a minimum 40 mm wide transom rail.

Transomed sidepanels may be included up to 1000 mm wide, with a minimum 40 mm wide mullion rail.

DOORPAC LIMITED Data Sheet CF5228 Page 3 of 14 January 2022

#### 5. Glazed Fanlights and Sidelights

Any CERTIFIRE approved glazing systems may be used providing the specification and installation details given in the appropriate certification documents are adhered to.

#### 6. <u>Supporting Construction</u>

The door assemblies are approved to be installed in brick, block, masonry, timber or steel stud supporting constructions of minimum overall thickness 70mm, providing at least 30 minutes fire resistance and previously proven capable of supporting a fire door assembly for the required integrity performance.

Where stud partitions are used these should be suitably constructed to provide a secure fixing for the door assemblies as recommended by the partition manufacturer

#### 7. Installation

The opening may be lined with softwood or hardwood which shall be continuous and of minimum width, 70 mm. Each door frame jamb to be fixed through to the wall at not less than four points with steel or nylon frame fixings screwed and plugged at maximum 600mm centres and penetrating the wall to at least 50 mm. Architrave is optional with no restrictions on material, size or fixing.

Door assemblies shall be installed as stated in BS 8214. Suitable CERTIFIRE approved lineal gap sealing systems may also be utilised to protect the frame / supporting construction gap, subject to the conditions contained within the relevant certificate.

The use of third party accredited installers provides a means of ensuring that installations have been conducted by knowledgeable contractors, to appropriate standards, thereby increasing the reliability of the anticipated performance in fire.

Door leaves may be trimmed to fit the frame by the following maximum amounts:

- Stiles (each) 3 mm
- Top 3 mm
- Bottom No limit providing bottom lippings are not fitted, 3 mm if bottom lipping is fitted and to be retained, alternatively unlimited if the bottom lipping is fully removed.

Note that the maximum door to frame and door to threshold gaps specified shall not be exceeded nor shall the door edge fitted with the CERTIFIRE label be trimmed since removal of the label will invalidate the certification.

The labelled edge may be subjected to minor 'shooting-in', providing the label is not damaged or removed in the process, and the amount of material removed does not exceed that stated previously.

#### 8. <u>Lippings</u>

| Hardwood | i) Density:  | 640 kg/m <sup>3</sup> minimum                    |  |
|----------|--|--|--|
|          | ii) Thickness:   | Minimum 5 mm                                     |  |
|          |  | Maximum 25 mm                                    |  |
|          | iii) Adhesive:   | Urea Formaldehyde, Cascamite, PVA or PU          |  |
| Notes:   | All doors, must be lipped to the                                       | e vertical edges as a minimum with the option to |  |
|          | apply lippings to the top and bottom leaf edges,                       |  |  |
|          | Maximum 2 mm thick decorative PVC / laminate edgings may be applied to |  |  |
|          | the vertical door edges in addi  | tion to 5 mm hardwood lippings.                  |  |

| Hardwood | i) Density:  | 640 kg/m <sup>3</sup> minimum           |  |
|----------|--|---|--|
|          | ii) Thickness:   | Minimum 8 mm                            |  |
|          | Maximum 25 mm  |   |  |
|          | iii) Adhesive:   | Urea Formaldehyde, Cascamite, PVA or PU |  |
| Notes:   | All doors, must be lipped to the vertical edges as a minimum with the option to apply lippings to the top and bottom leaf edges, |   |  |

#### Where doorsets incorporate the Winkhaus AV2 lock, lippings are required as follows:

#### 9. <u>Glazed Apertures</u>

All apertures to be factory prepared by Doorpac Limited, or a CERTIFIRE approved Licensed Door Processor. No site cutting of apertures permitted as this will invalidate the certification.

The leaf / leaves may incorporate any CERTIFIRE approved glazing system subject to the conditions contained within the relevant certificate (e.g., maximum size associated with glass or system, edge cover, aperture lining requirements etc.), and the maximum pane dimensions given above (whichever is the smaller):

Aperture dimensions: Doors may incorporate one of more vision panels to the maximum sizes identified in the table below:

Area: Maximum total glazed area of 1.51 m<sup>2</sup> per leaf

Margins: 100 mm from the perimeter edge, 100 mm between apertures

| Maximum Permitted Aperture Dimension                         |                       |      |  |  |
|--|-----------------------|------|--|--|
| Max. Height (mm) Max. Width (mm) Max. Area (m <sup>2</sup> ) |                       |      |  |  |
| 2085<br>(at 725 wide)  | 822<br>(at 1840 high) | 1.51 |  |  |

Hardwood or non-combustible setting blocks will be used to establish the correct edge cover

#### 10. <u>Recessed solid panels</u>

All apertures to be factory prepared by a CERTIFIRE approved Licensed Door Processor No site cutting of apertures permitted as this will invalidate the certification.

| Aperture dimensions: | Doors may incorporate one of more recessed solid panels to the maximum sizes identified in the table below:   |
|----------------------|---|
| Area:                | Maximum total recessed solid panel area of 1.33 m <sup>2</sup> per leaf   |
| Margins:             | 100 mm from the top and vertical edges, 200 mm to the bottom edge of the door leaf, 180 mm between solid recessed panel apertures.  |
| Panel Specification: | 44 mm thick Strebord blank recessed to a maximum depth of 10 mm both faces*, leaving a minimum thickness of 23 mm. Recess faced with 3 mm MDF to both sides bonded with PVA adhesive. Decorative timber beads are optional. |
|                      | * Both faces must be recessed equally.  |

| Maximum Permitted recessed solid panel Dimensions |                       |                             |  |
|---|-----------------------|-----------------------------|--|
| Max. Height (mm)                                  | Max. Width (mm)       | Max. Area (m <sup>2</sup> ) |  |
| 1831<br>(at 728 wide)                             | 728<br>(at 1831 high) | 1.33                        |  |

#### 11. Intumescent Seals

CERTIFIRE certificated intumescent seals are required to be fitted to these doors as below.

#### For door assemblies to BS 476: Part 22 – classified as FD30

#### Mann McGowan Pyrostrip 100P intumescent Seals – See Table 1 for size restrictions

| Doorset Configuration      | Position       | Intumescent Specification  |
|----------------------------|----------------|--|
| Single-Acting, Single-Leaf | Head           | Single 10 mm wide by 4 mm thick – centrally positioned                               |
| Latched / Unlatched        | Vertical Edges | Single 10 mm wide by 4 mm thick – centrally positioned                               |
|                            | Head           | Single 10 mm wide by 4 mm thick – centrally positioned                               |
| Single-Acting, Double-Leaf | Hanging Edges  | Single 10 mm wide by 4 mm thick – centrally positioned                               |
| Latched / Unlatched        | Meeting Edges  | Single 10 mm wide by 4 mm thick fitted centrally in the meeting edge of both leaves. |

#### Lorient Type 617 or 100P intumescent Seals – See Tables 2 & 3 for size restrictions

| Doorset Configuration                             | Position       | Intumescent Specification   |  |
|---|----------------|---|--|
| Single-Acting, Single-Leaf                        | Head           | Single 10 mm wide by 4 mm thick – centrally positioned                                    |  |
| Latched / Unlatched                               | Vertical Edges | Single 10 mm wide by 4 mm thick – centrally positioned                                    |  |
| Single-Acting, Single-Leaf                        | Head           | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |
| Latched / Unlatched                               | Vertical Edges | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |
| Single-Acting, Single-Leaf                        | Head           | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |
| Latched Only                                      | Vertical Edges | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |
|   | Head           | Single 10 mm wide by 4 mm thick – centrally positioned                                    |  |
| Single-Acting, Double-Leaf<br>Latched / Unlatched | Hanging Edges  | Single 10 mm wide by 4 mm thick – centrally positioned                                    |  |
|   | Meeting Edges  | 2No. 10 mm wide by 4 mm thick, positioned centrally,<br>12 mm apart, to primary leaf only |  |
| Single Acting Double Loof                         | Head           | Single 20 mm wide by 4 mm thick – centrally positioned                                    |  |
| Unlatched Only.                                   | Hanging Edges  | Single 10 mm wide by 4 mm thick – centrally positioned                                    |  |
| meeting stiles.                                   | Meeting Edges  | Single 15 mm wide by 4 mm thick fitted centrally in the meeting edge of both leaves.      |  |

| Decreat Configuration      | Desition       | Intumocount Specification   |  |
|----------------------------|----------------|---|--|
| Doorset Configuration      | Position       | intumescent Specification   |  |
| Single-Acting, Single-Leaf | Head           | d Single 15 mm wide by 4 mm thick – centrally positioned                                  |  |
| Latched / Unlatched        | Vertical Edges | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |
|                            | Head           | Single 15 mm wide by 4 mm thick – centrally positioned                                    |  |

| Winkhaus AV2 lock – Intumescent specification – See Table 6 for | size restrictions |
|---|-------------------|
|---|-------------------|

| Doorset Configuration   | Position              | Intumescent Specification   |
|---|-----------------------|---|
| Single-Acting, Single-Leaf<br>Latched<br>(Alternative intumescent types<br>are not permitted) | Frame Jambs &<br>Head | <ul> <li>2No Pyroplex 8500FO intumescents seals, 10 mm wide by 4 mm thick positioned 10 mm apart, 6 mm from the opening face in the frame reveal Or</li> <li>2No. Lorient Polyproducts Type 617 intumescent seals, 10 mm wide by 4 mm thick positioned 10 mm apart, 6 mm from the opening face in the frame reveal</li> </ul> |

Latched or unlatched, single acting, single-leaves as detailed in Tables 1, 2, 3 & 4, with maximum leaf dimensions 2040 mm high by 926 mm wide and of a minimum thickness of 44 mm may utilise alternative Intumescents in-line with the relevant CERTIFIRE approval for the proposed intumescent seal. All seals to be CERTIFIRE approved to Technical Schedule 35.

All other door assembly configurations, including those detailed in Tables 5 & 6 shall include the specific intumescent size type and location as specified within the data sheet.

Seals may be interrupted at hinge and latch positions. Seals may be fitted in the door edge or reveal.

Smoke seals may be included subject to the conditions contained within the relevant CERTIFIRE certificate for the smoke seal.

#### 12. <u>Hinges</u>

Hinges shall be CE marked against EN 1935 for use on 30 minute timber fire door assemblies.

| Number:                     | Minimum 3 No. hinges           |  |  |
|-----------------------------|--------------------------------|--|--|
| Туре:                       | Steel lift off or butt hinges. |  |  |
| Positions:*                 | Top Hinge:                     | Max 200 mm from the top of door to top hinge.      |  |
|                             | Middle Hinge:                  | Middle hinge fitted centrally in the leaf height.  |  |
|                             | Bottom.                        | Max 250 mm from the bottom of door to bottom hinge |  |
| Dimensions:                 | blade height:                  | 100 mm (+3 mm / -2 mm                              |  |
|                             | Blade width:                   | 35 mm (+ 3 mm / - 4 mm)                            |  |
|                             | Thickness:                     | 3 mm (+/- 1 mm)                                    |  |
|                             | Knuckle dia.:                  | 13.5 mm (+/- 1 mm)                                 |  |
| Fixings:                    | Quantity:                      | 3No. steel screws (minimum)                        |  |
|                             | Size:                          | No.5 by 30 mm long (minimum).                      |  |
| Intumescent<br>Protection** | None required.                 |  |  |

\* The datum in all cases is the centreline of the hinge.

\*\* The hinge specification above overrides any requirement for additional intumescent identified in the hinge manufacturer's certification providing the hinge specification falls within the parameters identified in the table above, specifically maximum dimensions and material.

Any other CERTIFIRE approved hinge may be fitted, providing the hinge dimension are no greater than 10% in blade width and 25% in blade height from that approved in the table above (excluding the tolerances stated). Where the Certifire approved hinge exceeds the specification given in the table above, the minimum requirement for intumescent protection to the hinges, by-passing perimeter intumescent, and the material density and thickness for the door and frame elements given in the hinge manufacture's CERTIFIRE certificate shall apply.

Page 8 of 14 January 2022

#### 13. Locks and Latches

Locks / latches where fitted shall be CE Marked in accordance with EN 1935 or EN179 for use on 30 minute timber fire doors.

Mortice type, automatic (sprung) latch bolt.

| Max. case dimension:     | 166 mm high by 98 mm deep by 20 mm wide  |  |
|--------------------------|--|--|
| Max. forend dimension:   | 235 mm high by 25 mm wide  |  |
| Max. keep dimension:     | 185 mm high by 25 mm wide (e   | excluding latch plate lip)   |
| Latchbolt material:      | Steel or brass   |  |
| Position:                | Max. 1100 mm from bottom of  | door to centreline of lockcase   |
| Cylinders                | Euro profile single cylinder, double cylinder or cylinder / thumbturn CE marked in accordance with BS EN 1303 as suitable for use on FD30 fire resistant assemblies. |  |
| Intumescent: protection* | Tubular latches  | None required  |
|                          | <ul> <li>Lock / latch <u>not</u> exceeding:</li> <li>155 mm by 22 mm forend</li> <li>125 mm by 24 mm keep<br/>(excluding latch plate lip)</li> </ul>                 | 1 mm Interdens Intumescent sheet material to keep only.  |
|                          | <ul> <li>Lock / latch exceeding:</li> <li>155 mm by 22 mm forend</li> <li>125 mm by 24 mm keep<br/>(excluding latch plate lip)</li> </ul>                            | 1 mm Interdens intumescent<br>sheet material to fully wrap<br>the case and under the<br>forend and keep. |
|                          | Doors fitted with a cylinder   | 1 mm Interdens intumescent<br>sheet material to fully wrap<br>the case and under the<br>forend and keep. |

\* The lock specification above overrides any requirement for additional intumescent identified in the lock manufacturer's certification providing the lock/latch specification falls within the parameters identified in the table above, specifically maximum dimensions and material.

Any other CERTIFIRE approved lock/latch may be fitted, providing no lock/strikeplate dimension is more than 25% of that approved in the table above and subject to the conditions contained within the relevant certificate. Where the Certifire approved lock/latch exceeds the specification given in the table above, the minimum requirement for intumescent protection to the locks, latches and strikeplates, by-passing perimeter intumescent, and the material density and thickness for the door and frame elements given in the lock/latch manufacture's CERTIFIRE certificate shall apply.

- Recessing for locks shall result in a tight fit, allowing for the intumescent protection specified.
- No restriction on type and material of face fixed mechanical lever handles and knobs providing these are wholly surface mounted (with the exception of the spindle and fixing holes) and the spindle hole is a maximum 15 mm in diameter.
- The Euro profile cylinder recess in the door face shall follow the shape of the cylinder and result in a tight fit.
- The use of oval profile cylinders is not permitted.
- Locks / latches are not permitted to be fitted to door leaves with rebated meeting stiles.

DOORPAC LIMITED Data Sheet CF5228 Page 9 of 14 January 2022

#### Gretsch-Unitas Multi point locks – Security Automatic VDS Class A – M101313

#### Gretsch-Unitas adjustable strike plates – (For use with Gretsch-Unitas Multi point locks)

The following adjustable strike plates may be used in conjunction with the Gretsch-Unitas M101313 multi point lock in accordance with the lock details stated in the section above:

| Adjustable strike plate: | central:   | 210 mm by 24 mm maximum (excluding lip) |
|--------------------------|--|---|
|                          | top & bottom:  | 140 mm by 24 mm maximum (excluding lip) |
| Intumescent protection:  | 1 mm Graphite sheet material under all adjustable strike plates. |   |

#### NSP Europe 'SMF-Duo' and 'SMF-614' electromechanical sashlocks, readers and handles

| Max. case dimension:     | 154 mm high by 100 mm deep by 23 mm wide  |
|--------------------------|---|
| Max. forend dimension:   | 204 mm high by 28 mm wide   |
| Max. keep dimension:     | 130 mm high by 32 mm wide (exc. latch plate lip) with dust box.   |
| Latchbolt material:      | Steel or brass  |
| Position:                | Max. 1100 mm from bottom of door to centreline of lockcase  |
| Operation:               | Suitable for use on doors proven suitable in an unlatched   |
|                          | configuration only.   |
| Lippings:                | Door leaves must include lippings in accordance with the  |
|                          | construction specification, with a minimum thickness of 6 mm  |
| Frames:                  | Frames are to be softwood or hardwood and have a minimum  |
|                          | density of 450 kg/m <sup>3</sup> .  |
| Intumescent: protection* | <ol> <li>1 mm thick Interdens sheet material to all faces and edges of the<br/>lockcase, behind the forend and to all faces of the strikeplate and<br/>backbox recess within the frame.</li> <li>1 mm thick graphite intumescent sheet material to be fitted inside<br/>the backbox to the vertical rear face.</li> </ol> |

• The 'SMF-Duo' ANSI electromechanical sashlock, reader and handles combination can be installed with the card reader to the fire risk or non-fire risk face.

- The 'SMF-614' ANSI electromechanical sashlock, reader and handles combination can be installed with the **card reader to the fire risk face only** (battery pack and thumbturn to the non-fire-risk face only).
- The 'SMF' ANSI electromechanical sashlock and '614 reader and handles combination must not be used where a specific direction of fire exposure for the doorset cannot be

#### identified.

#### Winkhaus AV2 Auto-Bolting Espagnolette Locks – Latched (top / middle / bottom)

| Dimensions:                | Lock Forend:  | 1770 mm high by 20 mm wide  |
|----------------------------|---|---|
|                            | Centre lock case:   | 185 mm high by 78 mm deep by 16.5 mm wide   |
|                            | Top & Bottom Case:  | 113 mm high by 48 mm deep by 16.5 mm wide   |
|                            | Centre Keep:  | 255 mm high by 24 mm wide   |
|                            | Top & Bottom Keep:  | 155 mm high by 24 mm wide   |
| Cylinder:                  | Euro profile double cylinder or cylinder / thumbturn CE marked in accordance with BS EN 1303 as suitable for use on FD30 fire resistant assemblies. |   |
| Intumescent:<br>protection | Forend:   | Forend to be bedded on an Exitex, Exi-Fire graphite intumescent pad, 0.8 mm thick.              |
|                            | Centre, Top & Bottom<br>Lock cases:   | All lock cases to be fully wrapped in a 1 mm thick AV2 intumescent kit by Lorient Polyproducts. |
|                            | Centre, Top & Bottom<br>Keeps:  | All keeps to be fully wrapped in a 1 mm thick AV2 intumescent kit by Lorient Polyproducts.      |

- Recessing for Gretsch-Unitas, NSP Europe & Winkhaus locks shall result in a tight fit, allowing for the intumescent protection specified.
- No restriction on type and material of face fixed mechanical lever handles and knobs providing these are wholly surface mounted (with the exception of the spindle and fixing holes) and the spindle hole is a maximum 15 mm in diameter.
- The Euro profile cylinder recess in the door face shall follow the shape of the cylinder and result in a tight fit.
- The use of oval profile cylinders is not permitted.

#### 14. <u>Self-Closing Devices</u>

All doors are required to be fitted with a CERTIFIRE certificated self-closing device. The exceptions are doors kept locked shut such as service access doors. Note: closers with mechanical hold-open mechanisms are not permitted to be used. Building Regulations may identify locations within domestic locations where self-closing devices are not mandatory.

The closers shall have a power rating appropriate to the leaf sizes, subject to the closer having the ability to close the door from any angle and against any latch and/ or seals fitted. The closer shall have the ability to provide size 3 closing force. Where doors are unlatched a minimum size 3 shall be maintained.

Closers shall be CE Marked against EN 1154 and categorised as grade 1 – suitable for use on fire / smoke door assemblies.

#### 14a Surface mounted overhead closers

Any CERTIFIRE approved surface mounted overhead closer may be fitted, subject to the conditions contained within the relevant certificate.

#### 14b Transom Mounted Closers

Not permitted

DOORPAC LIMITED Data Sheet CF5228 Page 11 of 14 January 2022 warringtonfire

#### 14c Concealed Closers

Door assemblies may incorporate CERTIFIRE approved concealed overhead closers in accordance with the following:

- Concealed overhead closers are to be CERTIFIRE approved for use with single-acting, latched and unlatched, intumescent sealed door assemblies consisting of timber faced and edged leaves with timber, cellulosic or mineral cores in timber frames having a fire resistance of 30 minutes (code ITT).
- Minimum leaf thickness to be in accordance with the CERTIFIRE certificate of approval for the specified closer and CF5228 (whichever is the greater thickness).
- Intumescent protection to the closer body and arm channel is to be in accordance with the CERTIFIRE certificate of approval for the specified closer.
- Closer body and arm positioning is to be in accordance with the CERTIFIRE certificate of approval for the specified closer.
- The minimum required frame density and section size are to be in accordance with the CERTIFIRE certificate of approval for the specified closer.
- Compliance is required with all additional requirements as stated within the CERTIFIRE certificate of approval for the specified closer.

#### 14d Floor Springs

Not permitted

#### 15. Ancillary items

## Please note that hardware items other than those discussed within this certificate of approval are not permitted.

#### 15a Protection plates and signage

Surface mounted plastic, steel, aluminium or brass plates are acceptable on the basis that:

- < 2mm thick
- Do not occupy more than 20% of the door leaf in total or exceed 500mm in height for kickplates and 300mm for mid-plates, whichever is the smaller.
- Do not wrap around the vertical edges, and on the closing face do not extend beneath the door stops (generally 40-50mm narrower than door width)
- Plates/signage can be bonded with a thermally softening adhesive. Additionally, screws may be used.

#### 15b Flushbolts

| Max. Dimension:         | 150 mm high x 25 mm deep x 19 mm wide                             |
|-------------------------|---|
| Material:               | Steel.  |
| Position:               | Top and bottom on door edge.                                      |
| Intumescent protection: | 1 mm Interdens to base and sides of bolt body and under the keep. |

Flushbolts are not permitted to be fitted in rebated meeting stiles.

| DOORPAC LIMITED   |
|-------------------|
| Data Sheet CF5228 |

#### 15c Pull Handles

Screw-fixed, bolt-fixed from the back and back-to-back fixed pull handles of steel, brass, aluminium and nylon coated are permitted providing any through-bolt fixings are of steel and maximum bolt to bolt centres do not exceed 1000 mm.

A maximum 15 mm diameter recess is permitted for through bolt fixings.

Bolt through fixings will require intumescent protection in the form of a 1 mm thick graphite tube, or Intumescent paste to the full depth of the recess.

#### 15d Air transfer grilles

#### No site cutting of apertures permitted as this will invalidate the certification.

Where apertures are pre-cut by Doorpac Limited, or a CERTIFIRE approved Licensed Door Processor, Intumescent Air Transfer Grilles may be fitted on site by NON-CERTIFIRE approved staff, however, the Intumescent Air Transfer Grilles shall be CERTIFIRE approved for use in FD30 timber based doors. The air transfer grilles must be fitted into apertures prepared in line with the relevant CERTIFIRE certificate for the air transfer grille. Care must be taken to ensure all fitting instructions are followed, including any constraints imposed by the CERTIFIRE certificate with regards to position of the air transfer grille within the door assembly.

#### 15e Letter Plates

Where letter plates are fitted, the aperture for a letter plate may be formed on site by NON-CERTIFIRE approved staff, however, the letter plates shall be CERTIFIRE approved for use in FD30 timber based doors. The letter plates must be fitted into apertures prepared in line with the relevant CERTIFIRE certificate for the letter plate. Care must be taken to ensure all fitting instructions are followed, including any constraints imposed by the CERTIFIRE certificate with regards to position of the letter plate within the door assembly.

#### 15f Dropseals

Door assemblies may incorporate CERTIFIRE approved dropseals with maximum dimensions of 35 mm high by 14 mm wide to the bottom edge of the door leaf.

Alternatively, door assemblies may be fitted with the following dropseals mortised into the bottom edge of the door leaf:

- Norsound NOR810s
- Lorient LAS8001si

Where dropseals are fitted the door leaf shall incorporate a 6 mm thick hardwood lipping to the bottom leaf edge. The hardwood lipping shall have a minimum density of 640 kg/m<sup>3</sup>.

Where dropseals are fitted, the recess for a dropseal may be formed on site by NON-CERTIFIRE approved staff. Care must be taken to ensure all fitting instructions are followed, including any constraints imposed by the CERTIFIRE certificate.

Note: Threshold gaps as stated within Section 3 of the Data Sheet are to be maintained between the bottom edge of the door leaf and the finished floor level.

Page 13 of 14 January 2022 warringtonfire

#### **15g Door Viewers**

A Door viewer may be fitted into the leaf providing the viewer comprises a metal sleeve and an optical glass lens and is not positioned higher than 1450 mm from the bottom edge of the door leaf. The door viewer should have an external diameter of not greater than 14 mm and must be tightly fitted within the leaf. Intumescent protection is not required.

#### 15h Coat Hooks and Other Surface Mounted Hardware

Ancillary items which are wholly surface mounted may be fitted providing:

- These items are screw fixed or bonded only
- Are not bolted through the full thickness of the door
- Are not directly above, or closer than 100 mm to any non-insulated glazing

#### 15i. Electric Strikes / Electromechanical locks

Not permitted, with the exception of the NSP Europe 'SMF-Duo' & 'SMF-614' electromechanical sashlocks discussed in section 13.

#### 16. Further Information

Further information regarding the details contained in this data sheet may be obtained from Doorpac Limited (Tel: 0114 256 1615).

Further information regarding the CERTIFIRE certification and other approved products can be obtained from CERTIFIRE (Tel: 01925 646777).
